Subject: National commitment to a just and ambitious energy transition

Personal note:

As Climate Reality Leaders and participants in the Climate Leadership Training in Paris, we call on the government to align its climate plans with the Paris Agreement and implement national policies that drive an ambitious and just energy transition. National governments play a critical role in ensuring that European climate ambition translates into real-world action that benefits citizens and economies alike.

We urge you to:

- Commit to ambitious 2035 and 2040 emissions reduction targets, aligned with the Paris Agreement, ensuring national policies reflect the need for deep decarbonization and long-term climate stability.
- Enhance national funding opportunities to finance a fair and inclusive energy transition, maximizing investments in clean energy and sustainable infrastructure to align with Paris Agreement decarbonisation objectives.
- End energy dependence on external fossil fuel suppliers, prioritizing domestic and regional clean energy solutions that reduce reliance on geopolitical uncertainties.
- Redirect fossil fuel subsidies into socially and economically sustainable solutions, including:
 - Renewable energy expansion
 - Energy efficiency improvements
 - Grid modernization to ensure system stability and affordability

The energy transition is not only an environmental necessity but also an opportunity to build a more prosperous, equitable, and secure future. By making the right decisions today, our country can position itself as a leader in clean energy adoption, energy security, economic resilience, and social well-being.

We urge you to act decisively and look forward to your commitment to making climate ambition a reality.

Respectfully,
